

PMS 0.3

Property Management System

USER MANUALS

Manual	Audience
1 · Back-Office (Staff)	Agency owners & property managers
2 · Tenant App	Residents / tenants
3 · Landlord App	Agency staff on the go

Screenshots are faithful UI mockups rendered to the platform's real design system (brand green #0F6E56, Sora / Plus Jakarta type, glassmorphism). They use the seeded demo brand; a vendor's own logo and colours replace them via Settings → Branding.

Demo Agency — Back-Office Manual (Staff)

A guide to the web console used by agency owners and property managers to run the portfolio: properties, leases, billing, owners, maintenance, messaging and branding. It also covers the **Owner Portal**, the read-mostly area your property owners sign into.

Screenshots use the seeded demo brand (green + gold). Your own logo and colours

*replace them once set in **Settings** → **Branding**.*

Contents Signing in · Dashboard · Properties & Units · Leases · Listings · Applications · Owners · Service Providers · Reports · Documents & e-sign · Inspections · API keys · Notifications · Messages · Settings (Branding) · Owner Portal

Signing in

Login screen

Authentication is **passwordless**. Enter your work email (e.g. `owner@demo.test`) and press **Send code**. A six-digit one-time code is sent to you (in development it prints to the API server console). Enter the code to sign in. Staff land on the Dashboard; property owners are taken to the Owner Portal.

Dashboard

Dashboard

Your portfolio at a glance: active leases, rent collected this period, total outstanding, and occupancy. The **collection-rate** bar and **rent roll** show how the month is tracking, and **Quick actions** shortcut the common jobs — running billing, generating owner statements, and reviewing new applications.

Properties & Units

Properties

Add a property with the form at the top (name, type, and an optional owner), then expand any property to manage its **units** — label, status (vacant / occupied / maintenance / reserved / offline), market rent and bed/bath counts. Deleting is blocked while a property still has units, or a unit still has an active lease, so you can't orphan records.

Leases

Leases

Every active lease with its unit, tenant, term and rent. Select a lease to **renew** it — enter an escalation percentage and a new term and the system creates the renewal. Leases flagged **renewal due** are approaching their end date.

Listings

Listings

Advertise a vacant unit: pick the unit, set the advertised rent and available-from date, then **Create**. A draft listing is private until you **Publish** it. Only vacant units appear in the picker.

Applications

Applications

Screen and decide on tenant applications

APPLICANT	EMAIL	STATUS	RECOMMENDATION
Kagiso P	kagiso@mail.com	submitted	—
Naledi K	naledi@mail.com	screening	Recommend
Johan V	johan@mail.com	approved	Lease created
Precious M	p.m@mail.com	rejected	—

Screen an applicant, then Approve (creates a lease) or Reject — all via pop-up dialogs.

Applications

Prospective tenants appear here as they move through the funnel. **Screen** an applicant (enter income and credit score in the pop-up) to get a recommendation, then **Approve** — which opens a dialog for the lease start date and creates the lease automatically — or **Reject**. All decisions run through confirmation dialogs, so nothing happens by accident.

Owners

Owners

The property owners you manage on behalf of. For each owner you can open their **Statements** (monthly collected / fee / net) and pay out a finalised statement, or edit their **Banking** details. Account numbers are **masked** in this list; the full number is only fetched when you open the banking editor, and it's **encrypted at rest**. A payout is refused until banking details are on file.

Service Providers

Service providers

Your approved contractors — plumbers, electricians, landscapers, security, legal and cleaning. Add them here with a category and contact. Active providers become selectable when staff assign a maintenance ticket in the landlord app, with category-matched providers offered first.

Reports

Reports

The income statement for a period — rental income, expenses, management fees and net payable to owners — with an **Export CSV** button for your accountant or bookkeeping system.

Documents & e-sign

Documents

Attach documents to a lease (lease agreements, receipts, notices). Upload a file or register a placeholder, then **Download** or **Send to sign** — the latter opens a dialog for the signer's email and returns a signing link. Documents are versioned and their status (stored / awaiting signature / signed) is shown.

Inspections

Inspections

Move-in, routine and move-out condition reports. Record the condition of each item, **sign off** the inspection, and apply any deductions to the tenant's deposit.

API keys

The screenshot shows a web application interface for managing API keys. On the left is a sidebar with a 'Demo Agency' header and a list of menu items: Dashboard, Properties, Leases, Listings, Applications, Owners, Providers, Reports, Documents, Inspections, **API keys** (highlighted), Notifications, Messages, Settings, and Sign out. The main content area is titled 'API keys' with the subtitle 'Programmatic access to your data'. It features a 'Create key' section with a text input for 'Name', radio buttons for 'read' and 'write' scopes, and a '+ Create' button. Below this is a table listing existing API keys.

NAME	PREFIX	SCOPES	STATUS
Zapier integration	pms_live_a1b2...	read	active
Reporting export	pms_live_9x8y...	read, write	revoked

API keys

For integrations. Create a key with **read** and/or **write** scopes — the full key is shown **once**, so copy it immediately. Keys can be revoked at any time (revocation takes effect instantly), and the list shows each key's prefix, scopes and status.

Notifications

Notifications

A delivery log of every message the system sent — rent invoices, payment receipts, statements, renewal reminders and dunning notices — with the channel (email / SMS / push) and status (queued / sent / delivered / failed).

Messages

Messages

Two-way messaging with tenants. The inbox (left) lists conversations with unread markers; open one to read the thread and **reply**. New tenant messages arrive **live** — no refresh needed. Use **Close** to resolve a thread; a tenant reply reopens it automatically.

Save branding

Live preview

D Demo Agency
Property, handled.

Primary button

Chip / badge

Branding settings

White-label the whole platform. Set your logo text, brand and accent colours, and contact details; the **live preview** shows the result. These values drive the web console, the tenant app and the landlord app, so a change here re-skins every surface for your agency.

Owner Portal

Owner portal overview

When a **property owner** signs in (role `owner`, e.g. `sipho@owner.demo.test`) they land here instead of the back office, seeing only their own data. The overview shows portfolio size, monthly rent, amounts paid to date and awaiting payout, occupancy, and their latest statement. The portal's own menu — **Overview, Statements, Properties, Banking** — lets owners review statements and payouts, see their properties' occupancy, and keep their payout bank details up to date. They never see other owners or the agency's back office.

Demo Agency runs on PMS 0.3. For setup and running instructions see [RUN.md](#); for deployment see [DEPLOY.md](#).

Tenant App — User Manual

The tenant app is how residents pay rent, log maintenance, read their documents and message the property manager — from their phone. This guide walks through every screen.

Screenshots use the seeded demo brand. Your building's own logo and colours

appear once your managing agent sets them.

Contents Signing in · Home · Pay rent · Documents · Report an issue (Maintenance) · Messages · Profile

Signing in

Tenant login

There's no password. Type the email or phone number your agent has on file and tap **Send code**. A six-digit code arrives by SMS or email (in a demo build it prints to the server console). Enter it and you're in — the app stays signed in on your device.

Home

Tenant home

Your home screen leads with **what you owe** — the current month's rent, the due date, and a **Pay rent** button. Below it, four quick tiles jump to **Pay**, **Log ticket**, **Lease** and **Messages**, and a **Recent** list shows your latest payments and resolved tickets. The bar along the bottom is your main navigation; the raised **+** button in the middle opens **Report an issue** from anywhere.

Pay rent

Pay rent

Tap **Pay rent** to see the amount due and choose a method — **Instant EFT** or **Card** — then confirm. You're taken to the secure payment page to complete it; once the payment clears, the invoice is marked paid automatically. Your full **payment history** is listed underneath, each marked **paid**.

Documents

Tenant documents

Everything your agent has shared with you — your lease agreement, deposit receipt, house rules and any notices. Tap **Open** to view or download a document. Items marked **Awaiting signature** need your e-signature; open them to sign.

Report an issue (Maintenance)

The image shows a mobile app interface for reporting a maintenance issue. At the top, there's a green header bar. Below it, the title "Report an issue" is displayed. Under the title, there's a "Category" section with three buttons: "Plumbing" (selected), "Electrical", and "Appliance". Below the category buttons is a "What's wrong?" section with a text input field containing the text "Geyser leaking into the ceiling...". Below the text input field is a green button labeled "Submit ticket". Below the "Submit ticket" button is a section titled "My tickets". Under "My tickets", there's a card for a ticket titled "Fridge not cooling" with a status of "resolved" and a location of "Appliance · Unit 101". Below the ticket card is a green button labeled "Approve & close". At the bottom of the app, there's a navigation bar with five icons: "Home" (selected), "Pay", a central "+" button, "Docs", and "Profile".

Report an issue

Tap the centre + button to log a maintenance problem. Pick a **category** (plumbing, electrical, appliance, and so on), describe **what's wrong**, and tap **Submit ticket**. Your existing tickets appear below with their status. When a job is fixed, the ticket shows **resolved** with an **Approve & close** button — tap it to confirm the work is done to your satisfaction.

Messages

Tenant messages

Chat directly with your property manager. Tap **New** to start a conversation (give it a subject and your message), or open an existing thread to continue it. Replies from your manager arrive here, and you'll see a dot on the Messages tab when there's something unread.

Profile

Tenant profile

Your details at a glance — your unit, lease term, monthly rent and the deposit held in trust for you. The **Sign out** button lives here at the bottom.

Trouble signing in or something not right? Contact your managing agent — their phone and email are shown on the app's branding.

Landlord App — User Manual

The landlord app is the on-the-go companion for agency staff (owners and property managers). It's a focused, mobile view for keeping the portfolio moving: pocket analytics, approving applications, dispatching maintenance, and messaging tenants. This guide covers every screen.

The landlord app shares its branding with the tenant app and web console. Set

both apps to the same vendor so the look matches.

Contents Signing in · Dashboard · Approvals · Maintenance · Messages · Profile

Signing in

Landlord login

Sign in with your staff email (e.g. `owner@demo.test`) and the six-digit code sent to you — the same passwordless login as the web console. Your role (agency owner or property manager) determines what you can do.

Dashboard

Landlord dashboard

Pocket analytics for the whole portfolio: active leases, rent collected this period, total outstanding, and open tickets. The **collection rate** bar tracks the month, and the **Portfolio** list shows each unit, whether it's occupied, its rent, and any amount due. Pull down to refresh.

Approvals

Approvals

New rental applications waiting on you. Each card shows the applicant, their contact, and the screening recommendation. **Approve** to create the lease, or **Reject** — the same decisions available in the web console, in your pocket.

Maintenance

Maintenance tickets

Every maintenance ticket. For an open ticket, pick a **service provider** to assign it to — providers whose category matches the ticket (e.g. a plumber for a plumbing job) are listed first and ticked — then tap **Assign**. As the job progresses you **Start** and **Complete** the work order (entering the cost, which posts to the ledger). Resolved tickets then wait for the tenant to approve and close them.

Messages

Landlord messages

Your tenant inbox. Conversations are listed newest-first with unread dots and the last message preview; tap one to read the thread and reply. New tenant messages arrive without refreshing.

Profile

Landlord profile

Your account and a quick portfolio summary — properties and units managed, rent collected this month, and open tickets — with **Sign out** at the bottom.

This app is a companion to the web back office. For portfolio setup, billing runs, owner statements, reports and branding, use the web console (see the Staff manual).
